

## Poly Bags & Liners

### Features and Benefits:

#### Versatile

- Poly Bags and liners can be fully customisable in size and can be tailored to suit any die cut shape or form including zip/sliders and perforations if required.
- Suitable for packaging various products including general merchandise or food products including fresh produce, grains, seeds, seafood, meats, powders etc.
- With variable material thickness, clarity and bag shape profiles to suit, these lightweight bags and films can be used to reduce packaging material used.
- Snell Flexibles is a partner in the Soft Plastics Recycling Scheme which means that these bags and films are now fully recyclable in New Zealand and Australia.

#### Quality, Food Safety and Compliance

- Snell Packaging & Safety is certified to ISO9001/2000, 14001 & HACCP
- Manufacturing is certified to ISO 22000, HACCP & BRC Global Standards
- Food safety, hygiene and quality are monitored in every part of the production process.

#### Fit for Process

- Poly bags and liners can be used for both automated and manual packing/filling operations. Available as loose, on a wicket with and without a wire and perforated on a roll as required by the manufacturing operation.
- Poly bags and liners can be manufactured to a variety of key production and distribution requirements including high puncture resistance, ambient or freezer grade and leak proof formats.
- At Snell Flexibles we can deliver a good quality imagery through both Flexographic and gravure printing on low gauge Poly bags and liners.

#### Customised Construction

- Poly bags and liners can be constructed using various material grades, thicknesses and clarity depending upon the product packing conditions and required in market requirements.

#### Smart Packaging Solutions

- Poly Bags can be tailored to the desired shape and form to add appeal and value to your product and brand. They can be manufactured using varying materials providing great various functionality and clarity to showcase your products. Varying form factors allows for manual and automated packing options to suit efficient operations requirements.
- A great and cost-effective way to generate visual appeal to the brand and the end-user.
- Poly Liners can be tailored to the desired shape and form to add great product protection and reduce damage to your product in transit. They can be manufactured using varying materials providing varying functionality to either contain or protect your product.
- Liners can be supplied on wickets, loose or perforated on a roll, for easy manual and automated packing options to suit efficient operations requirements.

**Packaging Processes:**

Poly bags and liners are suitable for:

- Ambient manual and/or automated filling operations.
- We work to understand customer processes so that we can deliver packaging in a form that fits your manual or automation requirements.
- Our experienced Flexibles team will help customers optimise their packaging and processes to maximise efficiency and at the same time minimise downtime. We have a wide understanding of all packaging systems, so we can often solve technical problems before they occur.

**Packaging Options**

- Single ply, Single ply multilayer co-extruded films, non-barrier structures

**Packaging Film Finishes**

- Plain, High clarity plain, also printing up to 8 colours, gloss and semi-gloss
